Borena

### Producer

Smallholder farmers

### Altitude

1,800 - 2,000 masl.

### Variety

Heirloom Cultivars

### Harvest Period

Dez – Jan

### Classification

Grade 2

### Processing

Washed

## ETHIOPIA WASHED YIRGACHEFFE GRADE 2 TOP - PROJECT COFFEE A4A - FARMING ACCELERATOR

Ethiopia is considered the cradle of coffee, based on the fact that it was in the forest of the Kaffa region where *Coffea Arabica* was discovered. Today, Ethiopia is one of the most compelling coffee-producing countries with a great diversity of flavors.

This coffee was grown in Doko Chere, a kebele located in the Galana Abaya district in the Borena region of Yirgacheffe. It was produced within the United Nations International Trade Centre's Alliances for Action Program and List + Beisler's Farming Accelerator project. For this project, the UN-ITC and List + Beisler partnered with the data collection and analysis organization Enveritas and a local NGO in Ethiopia.

Together, we are training 1,800 smallholder farmers in best agricultural practices and understanding farming as a family business. The farmers get together for training on good agricultural practices such as composting, tree pruning, rejuvenation, and intercropping. Another vital area of action is developing adaptation strategies to changing climate conditions. In Ethiopia, coffee production is often a family business. Therefore, gender equality and women empowerment are emphasized in the training curriculum. Overall, the Farming Accelerator project aims to increase the farmers' crop productivity through sustainable practices, ultimately improving their livelihood. We are pleased to offer you this exceptional coffee.

**Black Tea • Bergamot • Citric Acidity  
Slight Jasmine and Kiwi**
