1,700 - 2,200 masl.

Variety

Various cultivars

Harvest Period

Mar - Jun

Classification

A, Screen 15+

Processing

Washed

RWANDA FW A SCR. 15+ MUTETELI

Rwanda is a country full of diversity and rich in fertile lands. The whole country is set on a relatively high altitude, the lowest point being 950 meters above sea level. Earthy swamps and sunny savannahs prevail in the east, while the center is characterized by rolling hills. Sometimes it is a tough choice to choose coffee from only one region when the climatic conditions for coffee cultivation are excellent across the whole country. That is why we have created our Muteteli brand for you to offer a distinct cup profile from our favorite three areas in Rwanda.

In the west lies the Albertine Rift montane forests ecoregion with an abundance of wildlife and Lake Kivu on the border with Congo. This area is generally not as hot as the east, leaving room for excellent coffee cultivation conditions. Here, the Kanyege washing station receives coffees from about 1,200 local smallholder farmers. Going up north, rich volcanic soils and verdant slopes contribute juicy aromas from the hilly Gicumbi District in the Northern Province, being home to the Karisimbi washing station. The third coffee to round up the Muteteli cup is found in the Southern Province. The Gitega Hills washing station was opened in 2015. The many smallholder farmers from this area cultivate their coffee in one of the most densely forested regions in Rwanda.

All three coffees are grown in an altitude range between 1,700 and 2,200 meters above sea level. We aim to reflect the many facets Rwanda has to offer in this delicious cup of List + Beisler Muteteli and hope you enjoy it, too!
